

GIS LEARNER SKILLS AWARD

AWARDED TO

John Ling, 12W

AWARDED FOR EXCEPTIONAL ACHIEVEMENT IN

Solving Problems

Think
Differently

I am able to effectively solve increasingly **complex problems**. My solutions fit within **organisational constraints** and are likely to be accepted by others. My solutions stand up to testing and are continuously **monitored**. My solutions can **adapt** to future changes and evolve based on a **continuous feedback** loop.

SUMMARY OF ACHIEVEMENT

John's work in setting up 'Plugged In Malaysia' has exemplified a whole range of learner skills, but especially 'solving problems'. John has identified an inequality from experiences of the pandemic and has worked to bridge that gap, refurbishing computers to provide access for those whose education would otherwise have been affected. The scale of this work has grown and been recognised by outside organisations, and shows what amazing things can be achieved when you have real determination, but also a willingness to think differently about issues.

EVIDENCE

John has chosen to evidence his application with a report reflecting on his work and the skills statement of 'Exceptional' for 'Solving problems', which you can see [here](#)
